

## Geometric Interpretation

slope is  
 $f_x(a, b)$

plane  $y = b$

parallel to the  $xz$ -coordinate plane.

$$g(x) = f(x, b)$$

$f_x(a, b) = g'(a) =$   
slope of tangent to  $g(x) = f(x, b)$   
at  $x = a$ .

for  $f_y(a, b) = h'(b) =$  slope of tangent to  
 $h(y) = f(a, y)$  at  $y = b$

take slice at  $x = a$ , parallel to the  $yz$ -coordinate plane.

# Implicit differentiation

$$x^3 + y^3 + z^3 + xyz + xy = 1$$

$z$  is a function of  $x, y$   
find partial wrt  $x$

$$3x^2 + 0 + 3z^2 \frac{dz}{dx} + yz + xy \frac{dz}{dx} + y = 0$$

$$\frac{dz}{dx}(3z^2 + xy) = -3x^2 - yz - y$$

$$\frac{dz}{dx} = \frac{-3x^2 - yz - y}{3z^2 + xy}$$

Functions with more than two variables.

$$w = f(x_1, \dots, x_n)$$

$$\frac{\partial w}{\partial x_i} = \frac{\partial f}{\partial x_i}$$

Example  $x^2 e^{y^2+z}$

$$\frac{\partial f}{\partial x} = 2x e^{y^2+z}$$

$$\frac{\partial f}{\partial y} = x^2 2y e^{y^2+z}$$

$$\frac{\partial f}{\partial z} = x^2 e^{y^2+z}$$

Higher derivatives

$$(f_x)_x = f_{xx} = \frac{\partial}{\partial x} \left( \frac{\partial f}{\partial x} \right) = \frac{\partial^2 f}{\partial x^2}$$

$$(f_x)_y = f_{xy} = \frac{\partial}{\partial y} \left( \frac{\partial f}{\partial x} \right) = \frac{\partial^2 f}{\partial y \partial x}$$

left to right  $\nearrow$  right to left

$$(f_y)_x = f_{yx} = \frac{\partial}{\partial x} \left( \frac{\partial f}{\partial y} \right) = \frac{\partial^2 f}{\partial x \partial y}$$

$$(f_y)_y = f_{yy} = \frac{\partial}{\partial y} \left( \frac{\partial f}{\partial y} \right) = \frac{\partial^2 f}{\partial y^2}$$

ex.  $f(x, y) = x \sin(y) + ye^x$

$$f_x = \sin(y) + ye^x$$

$$f_y = x \cos(y) + e^x$$

$$f_{xx} = ye^x$$

$$f_{yy} = -x \sin(y)$$

$$f_{xy} = \cos(y) + e^x$$

$$f_{yx} = \cos(y) + e^x$$

$$f_{xy} = f_{yx}$$

Not always the case.

## Clairaut's Theorem

Let  $U = \{(x, y) \mid (x-a)^2 + (y-b)^2 < r^2\}$ ,

which is the open disk of radius  $r$  centered at  $(a, b)$ .

If  $f(x, y)$  is a real valued function defined

on  $U$  such that  $f_{xy}$  and  $f_{yx}$  both exist

and are continuous on  $U$  then  $f_{xy} = f_{yx}$

on  $U$ .
